

## CPC Africa Desk InterTropical (ITF) Front Analysis

## August 2016, Dekad 3

## Discussion:

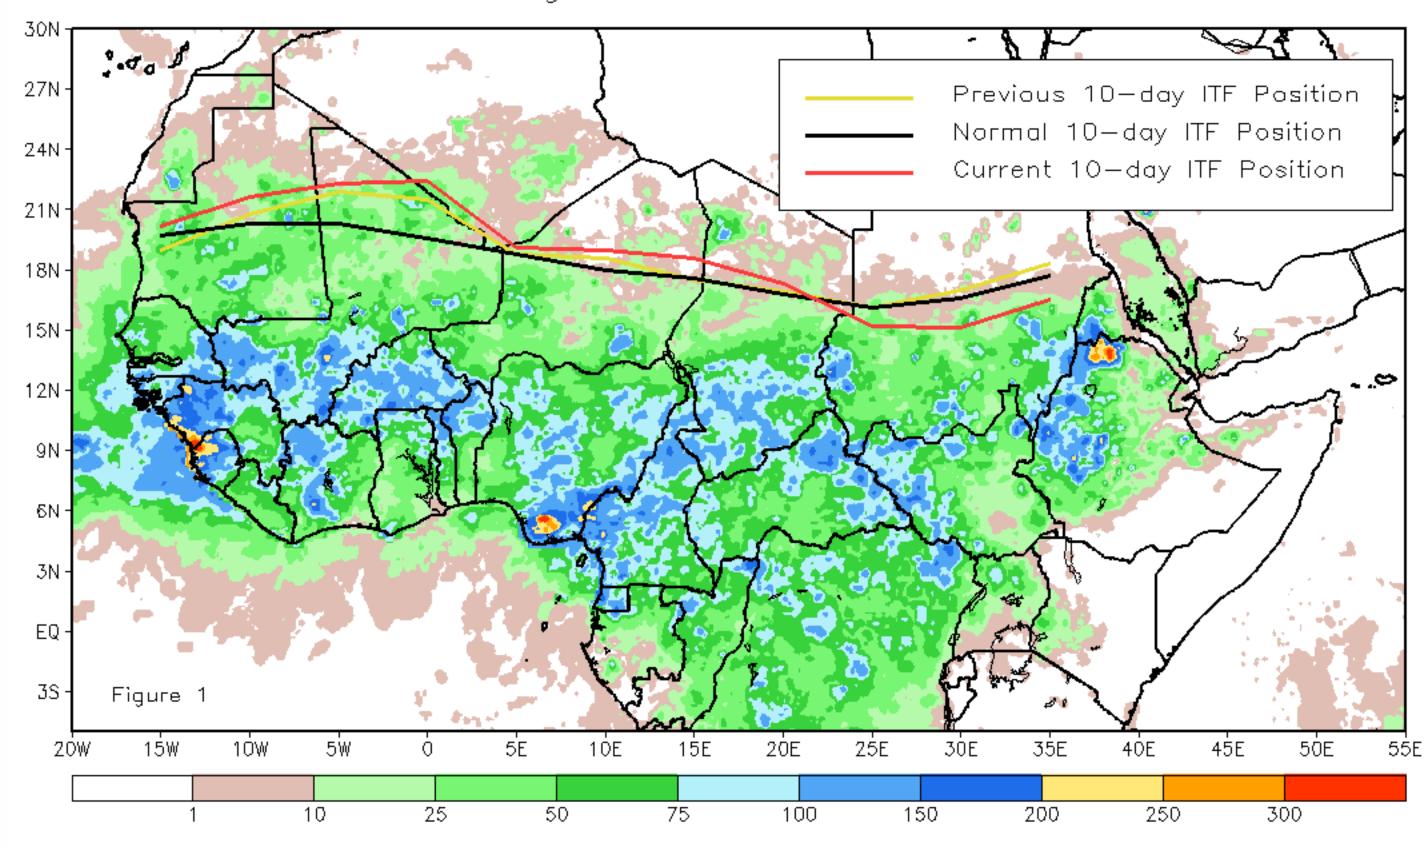

From August 21-31, the ITF remained farther north and above the long-term mean position across the western portions of Africa, while it began its southward retreat across its eastern counterparts. From 10W-10E, the mean position of the ITF was located approximately at 20.9N, which was anomalously north of the average position by 1.5 degrees. From 20E-35E, the mean position of the ITF was located at 16N, which was to the south of the climatological position by 0.8 degree. Figure 1 shows the current position of the ITF relative to its climatological position during the 3rd dekad of August, and its previous location during the 2nd dekad of August. Figures 2 and 3 are time series, illustrating the mean latitudinal values of the western and eastern portions of the ITF, respectively, and their evolutions since April, 2016.

Mean Western Portion of the ITF: Averaged 10W to 10E As of: August 2016, Dekad 3

Current vs. Normal Dekadal ITF Position and RFE Accumulated Precipitation (mm)

August 2016, Dekad 3

Mean Eastern Portion of the ITF: Averaged 20E to 35E As of: August 2016, Dekad 3
